Abhishesh Ramadas Shet

Bengaluru, India | +91 9008262671 | abhishesh.shet@gmail.com | linkedin.com/in/abhishesh-ramadas-shet | github.com/abhi0874

Summary

Recent Bachelor of Engineering (B.E.) graduate in Artificial Intelligence & Machine Learning with a strong foundation in software engineering, programming, data structures and algorithms, object-oriented programming, debugging and testing. Built applications using Python, Java, Kotlin, JavaScript, SQL, REST APIs and PostgreSQL, including a RAG system that reduced query latency by 98%. Familiar with Git-based collaborative development, pull requests, code reviews and AI-assisted development. Applying for the **Software Engineer Intern** role at **Stripe**.

Education

Sir M Visvesvaraya Institute of Technology — Bengaluru, Karnataka, India
B.E. in Artificial Intelligence & Machine Learning | CGPA: 8.73 — *Dec 2022 – Jun 2026*

Gurukula Pre-University College — Kundapura, Karnataka, India
Physics, Chemistry, Mathematics & Computer Science | 94.67% — *Jun 2020 – Apr 2022*

Experience

MindMatrix.io — Remote
Software Developer Intern — *Feb 2026 – May 2026*

- Developed Android applications in Kotlin and Jetpack Compose using Android Studio, Google Cloud Labs and Google AI Studio to explore Generative AI capabilities in application development.
- Worked through UI/UX design, prototyping and feature development, then debugging and iterative enhancements, with project-based learning in Firebase integration, testing and standard Android development workflows.

Projects

RAG Document Assistant | *Python, PostgreSQL, pgvector, Next.js, Gemini API* — GitHub

- Built a full-stack document question-answering application with a Next.js interface and Python API endpoints for document ingestion, semantic search, retrieval and AI-generated responses.
- Stored document embeddings in PostgreSQL using pgvector and optimized document chunking for semantic similarity search, reducing query latency by **98%**.

CampusCompass — Indoor Navigation System | *Python, NetworkX, OpenCV, Pandas* — GitHub

- Developed an indoor pathfinding system using NetworkX's implementation of Dijkstra's algorithm, constructing a graph from structured CSV node and edge data and generating navigation routes programmatically.
- Collaborated as a core developer in a multi-person project using Git, pull requests and code reviews, incorporating technical feedback and contributing changes through a collaborative software development workflow.

Kutira Kushala — Android Marketplace | *Kotlin, Java, MVVM, Firebase* — GitHub

- Built an Android marketplace with authentication where artisans and home-based businesses can create profiles, upload products, manage production capacity and connect directly with buyers.
- Developed application features using Kotlin and Java with Firebase integration, asynchronous API workflows, debugging and unit testing to improve application functionality and reliability.

Technical Skills

Programming Languages: Python, Java, JavaScript, C/C++, Kotlin, SQL
Software Engineering: Data Structures & Algorithms, Object-Oriented Programming (OOP), Debugging, Unit Testing, REST APIs, JSON, Code Reviews, Pull Requests
Backend & Databases: PostgreSQL, SQLite, pgvector, Firebase, API Integration, Semantic Search
Developer Tools: Git, GitHub, Postman, Android Studio, Google Cloud, Google AI Studio
AI & Machine Learning: AI-Assisted Development, Gemini API, Claude, RAG, Embeddings, TensorFlow, CNNs, OpenCV, Pandas

Certifications

Oracle: Cloud Infrastructure 2025 Data Science Professional | Generative AI Professional | AI Foundations Associate
Google (Coursera): IT Automation with Python | **freeCodeCamp:** JavaScript Algorithms & Data Structures
